# What This Week's Jobs Report Means For Rates

All eyes were on the big jobs report this week. Traders were anxious to see if it would be strong enough to accelerate the timeline for key policy changes that would greatly impact rates.

The bond market and indeed many homeowners remember 2013's **taper tantrum** all too well. For those who need a refresher, the taper tantrum occurred after the Fed began tapering the bond purchases that had been holding interest rates down. Rates shot up at one of the fastest paces in history.

With the Fed **still** buying **\$120 bln** per month in Treasuries and mortgagebacked bonds since the start of the pandemic, traders know there will eventually be **another reckoning**. Fed speakers have been clear in saying they'll provide ample warning this time around, but no one wants to be late to that party! So traders are perpetually dissecting all incoming economic data for early warning signs.

Among that data, the big jobs report (officially, the "employment situation" from the Bureau of Labor Statistics) reigns supreme. **No other report** is held in the same regard when it comes to its ability to guide policy and trading decisions.

As covid case counts drop and vaccinations increase, local economies are quickly moving back toward more normal levels of activity. Traders have been expecting that activity to start showing up in the data. but the turnaround hasn't been as noticeable when it comes to the big jobs report.

Case in point, this week's second most important report, the monthly index on activity in the services sector published by the Institute For Supply Management (ISM) just hit an all-time high. The higher it is, the faster the economy is growing.

#### National Average Mortgage Rates

In addition, several of the week's other labor-related reports showed ongoing improvement. Of particular note was the longstanding, but still fairly obscure "Job Cut Report" from staffing agency Challenger, Gray, and Christmas. It hit its **lowest level in 2 decades** last month, and essentially maintained it in the most recent report.

The weekly data tells the same story with Jobless Claims hitting another post-pandemic low.

In fact, even when we consider the headline from the big jobs report (**559k new jobs** created last month versus **only 278k** in the previous month), it seems like everyone is on the same page and that we should increasingly worry about the Fed. But the catch is that the market would have needed to see a number closer to 1 million in order to really freak out. As it stands, 559k didn't even hit the median forecast of 650k.

When we look at a minute-by-minute breakdown of the reaction to the jobs report, we can see **just how nervous** both sides of the market were. Stocks and bonds (aka "rates") improved almost instantly and rather significantly.

And when we zoom out a bit, we get the impression that this isn't the first time stocks and bonds have moved in this symmetrical pattern--improving together when expectations for Fed support improve and losing ground together when Fed support seems less certain.

We're using stocks in the charts above purely to illustrate a point about how the overall financial market reacts to Fed accommodation prospects. The bond market is what matters for rates, and the **big picture is fairly clear**: despite any short-term volatility, we remain in an "intermission" after rates moved higher at the beginning of the year.

Side note: mortgage rates haven't cut the same path as Treasuries, but that was an **exception** to a generally well-behaved rule. While we may still see small departures from that rule, the big disconnect from 2020 is now resolved. Translation: it's once again OK for mortgage rate watchers to pay attention to Treasury yield trends.

So what does this week's jobs report mean for rates? It means we get to do the same song and dance next month, if not sooner! The jobs report data was collected over 3 weeks ago and things are changing rapidly. Each new update on the labor market runs the risk of making Fed taper talk a reality. We can enjoy these short-term recoveries in rates, but barring a major economic stumble, the intermission is more likely to give way to another move higher.

# About Your Los Angeles Mortgage Broker

Shannon's expertise in residential mortgage lending spans more than 20 years. Beginning on the ground floor of the wholesale side of lending, Shannon subsequently succeeded as a loan officer, account manager, and account executive while working for one of the nation's largest mortgage lenders. In contrast to those who chose to leave the mortgage industry when the Los Angeles housing market began to spiral in 2008; Shannon's passion for helping others to become homeowners remained firmly intact. In fact the changes in the market and new lending laws made her want to help homebuyers to navigate the new rules of real estate lending more than ever. As such, she chose to transition to the retail side of real estate financing in effort to work closer with families, veterans, and those who had previous financial hardships to achieve their goals of home ownership. As a homeowner and real estate investor, Shannon's personal experience in obtaining mortgage loans for her own purchases is extensive. She has bought and sold multiple properties and continues to invest in real estate throughout Los Angeles County. Shannon's specialization and breadth of experience in real estate purchase loans enables her to offer standard/conventional loans, government loans, hard money loans, and specialty/portfolio products.
