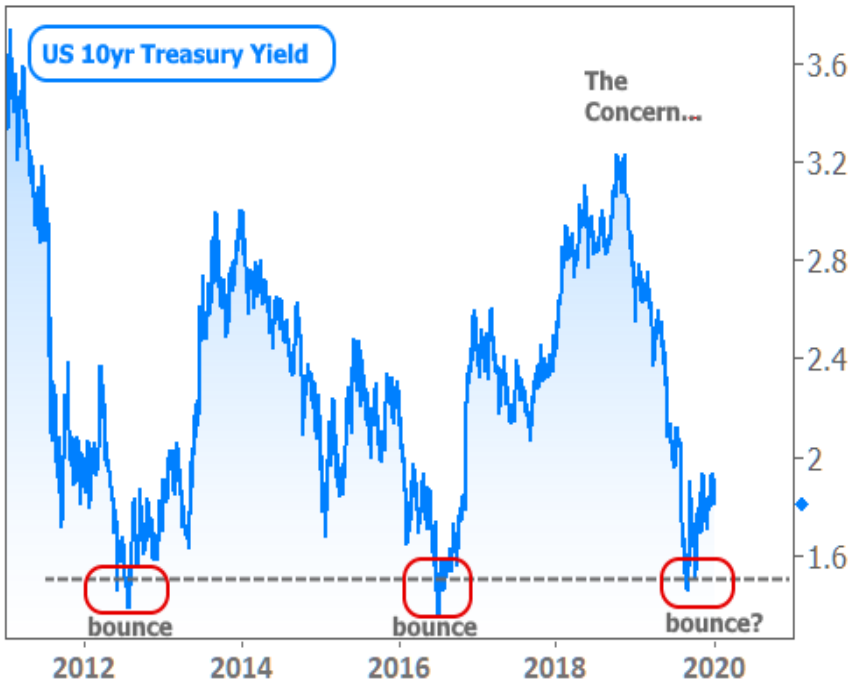
Mortgage Rates Start 2020 on Strong Note

Everything's relative when it comes to mortgage rates. For every homeowner that's been concerned about a short-term increase in rates, there's another who's glad to remind them how high rates used to be.

At the moment, with top tier 30yr fixed offerings hanging out under 4%, it's **hard to be too concerned** about where we are **today**. But fretting over the **future** is always fair game. With that in mind, let's repeat a chart from the previous newsletter that showed the long-term trend in rates (as represented by 10yr Treasury yields--the benchmark for all longer-term rates in the US).



In other words, rates had a **stellar** run from long-term highs, ultimately bouncing near all-time lows. The last two times this has happened, it marked a big picture turning point that ultimately restored long-term highs.

A repeat performance is always possible, but there are a few things worth noting. First off, the other two examples both **relied on a catalyst event** for the majority of the momentum back toward higher rates. In 2013 it was the Fed signaling an end to QE (the bond-buying program that had helped rates realize all-time lows only a few months prior). In 2016 it was the market's reaction to the presidential election.

National Average Mortgage Rates

Mortgage News Daily

	Rate	Change	Points
30YR Fixed	7.27%	-0.02	0.00
15YR Fixed	6.92%	-0.03	0.00
30YR FHA	6.90%	-0.01	0.00
30YR Jumbo	7.55%	0.00	0.00
7/6 SOFR	6.78%	-0.10	0.00
30YR VA	6.91%	-0.01	0.00

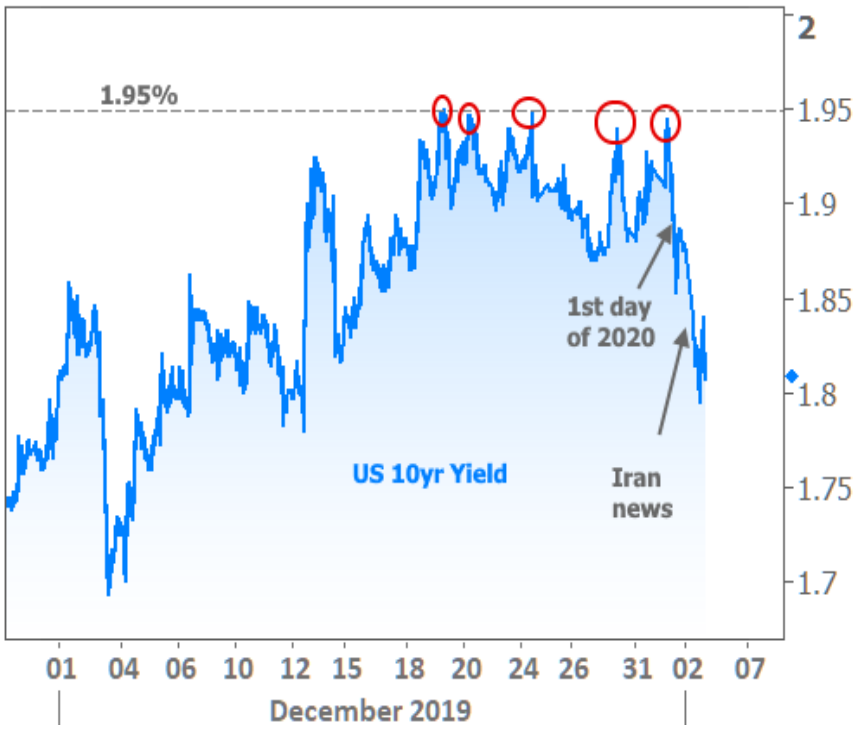
So far, we **don't** have an equivalent sort of motivation, just the initial corrective bounce that seems to be common for all 3 examples. To be fair, that motivation could materialize simply due to strong economic data and a solidified US/China trade deal, but neither is a given at this point. Conversely, there's no rule that says rates can't turn right back around and head lower again.

That sort of friendly momentum can come from things like geopolitical risks and disappointing economic data. It can even be as simple as traders seeing a show of support at any given **ceiling level** for rates. **1.95% in 10yr Treasury yields** filled that role at the end of December (as seen in the chart below). By the end of this week, that supportive undertone was joined by geopolitical risk (escalation in US/Iran relations after a drone strike killed Iran's top military leader) and weak manufacturing data on Friday morning.



If December looked like a dicey month for rates, remember, everything's relative when it comes to mortgage rates. While it's true that Treasury yields set the tone for overall rate momentum, mortgage rates are ultimately based on mortgage-specific bonds that can move a bit differently at times. December was one of those times--something we can easily see if we chart the movement in mortgage-backed securities versus Treasury yields.

The takeaway there is that mortgage rates were **already** near their lowest levels in a month a few days **before** Treasury yields experienced their biggest recent drop.

Why was the mortgage sector able to outperform Treasuries? There are several fairly boring, confusing reasons for that, but one fairly simple one. So let's stick with what we know (i.e. everything's relative for mortgage rates, and this is no exception). Simply put, mortgages were able to outperform Treasuries because they had underperformed so badly in August and September.

Explaining past movement is one thing. Getting ahead of the next big move is another. To reiterate, there's certainly a concern about history repeating itself as seen in the first chart, but again, it will take a catalyst. Progressively stronger econ data in 2020 would do plenty of damage to rates, but there's no way to know if that's what we'll see until we see it.

When it comes to deciding on what to watch, **next week is a great candidate**. It has a slew of the most important monthly economic reports, and it occurs on the first full week back from holiday breaks for many market participants. There's also a high probability of additional headlines over the weekend that speak to geopolitical risks.

About Your Los Angeles Mortgage Broker

Shannon's expertise in residential mortgage lending spans more than 20 years. Beginning on the ground floor of the wholesale side of lending, Shannon subsequently succeeded as a loan officer, account manager, and account executive while working for one of the nation's largest mortgage lenders. In contrast to those who chose to leave the mortgage industry when the Los Angeles housing market began to spiral in 2008; Shannon's passion for helping others to become homeowners remained firmly intact. In fact the changes in the market and new lending laws made her want to help homebuyers to navigate the new rules of real estate lending more than ever. As such, she chose to transition to the retail side of real estate financing in effort to work closer with families, veterans, and those who had previous financial hardships to achieve their goals of home ownership. As a homeowner and real estate investor, Shannon's personal experience in obtaining mortgage loans for her own purchases is extensive. She has bought and sold multiple properties and continues to invest in real estate throughout Los Angeles County. Shannon's specialization and breadth of experience in real estate purchase loans enables her to offer standard/conventional loans, government loans, hard money loans, and specialty/portfolio products.
