The Case of The Disappearing Rate Cuts

The Fed expected to be able to cut rates 3 times in 2024 as recently as March. Financial markets agreed. But the data that's come out since then has everyone singing a different tune. This week's data was more of an afterthought compared to last week's.

The chart above pertains to Fed rate expectations, and that's not exactly the same as longer term rates like mortgages and 10yr Treasury yields. The latter saw a bit more volatility this week.

Monday's Retail Sales data was much stronger than expected and markets reacted immediately. Tuesday's data was consequential, but it was followed by a speech in which Fed Chair Powell had an opportunity to provide some updated thoughts on the rate outlook. After all, the Fed hadn't seen the most recent CPI data (and several other strong reports) at the time the last round of rate projections came out in March.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30YR Fixed	7.27%	-0.02	0.00
15YR Fixed	6.92%	-0.03	0.00
30YR FHA	6.90%	-0.01	0.00
30YR Jumbo	7.55%	0.00	0.00
7/6 SOFR	6.78%	-0.10	0.00
30YR VA	6.91%	-0.01	0.00

Rates as of: 10/30

MBS and Treasury

	Price / Yield	Change
MBS UMBS 6.0	99.81	-0.02
10 YR Treasury	4.9299	+0.0084
30 YR Treasury	5.3082	+0.0081

Pricing as of: 10/30 5:59PM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Oct 21	195	+3.39%
Building Permits	Sep	1.4M	+0.43%
Housing Starts	Sep	1.22M	-4.24%
New Home Sales	Sep	676K	-1.17%
Pending Home Sales	Aug	71.2	0%
Existing Home Sales	Oct	3.99M	+0.25%
Builder Confidence	Oct	29	-9.38%

As the market expected, the tone is evolving. While Powell and the Fed repeat that the rate path depends on economic data, it's no surprise to see recent comments acknowledging a surprising amount of strength in the recent data. Stronger data means fewer rate cuts. Powell went as far as saying there was new uncertainty as to whether the Fed will even be able to cut in 2024.

Two days later, NY Fed President John Williams struck similar tone. Just last week, he had pushed back on the CPI data, saying the Fed wasn't surprised by setbacks in the inflation data. This week's comments did more to acknowledge the other side of data dependency. Specifically, Williams said the Fed could hike again if the data called for it.

To be sure, these are not earth-shattering "ifs" and "thens." But the market hones in on the subtle differences with which the data dependency is communicated. It didn't help that Thursday morning's Philly Fed Manufacturing Index moved up to the highest levels in 2 years or that the "prices paid" component of the same report moved up much more than economists expected.

Here's how the entire week looked in terms of 10yr Treasury yields.

Friday's reaction to the attacks in Iran is important because it shows us that some geopolitical news is indeed worth a reaction. That was less clear earlier in the week as multiple batches of somewhat similar headlines failed to cause as much movement. The difference on Friday was the uncertainty over the status of Iran's nuclear sites as well as concern that it would be the catalyst for the outbreak of much more significant fighting. The market calmed down quite quickly once it was clear the nuclear sites were not damaged and that Iran was not retaliating. The correlation between stock prices and bond yields further confirms the "flight to safety" trading pattern commonly seen after such news.

In the bigger picture, the past 2 weeks have gone a long way toward making the end of 2023 look like yet another "false start" toward lower rates. Up until then, we had sort of a sideways fighting chance. While we have labeled late 2023 as the 3rd false start of this cycle, it wouldn't meet the purest definition until rates rise back above last October's highs. We're definitely not there yet and we won't know if we'll get there until we see the next round of big ticket economic data in May.

In the meantime, home sales remain constrained.

Next week's economic data is fairly muted apart from Friday's PCE price index. This isn't as much of a market mover as the Consumer Price Index (CPI), but it could certainly cause some volatility if it happens to send a different message.

About Your Los Angeles Mortgage Broker

Shannon's expertise in residential mortgage lending spans more than 20 years. Beginning on the ground floor of the wholesale side of lending, Shannon subsequently succeeded as a loan officer, account manager, and account executive while working for one of the nation's largest mortgage lenders. In contrast to those who chose to leave the mortgage industry when the Los Angeles housing market began to spiral in 2008; Shannon's passion for helping others to become homeowners remained firmly intact. In fact the changes in the market and new lending laws made her want to help homebuyers to navigate the new rules of real estate lending more than ever. As such, she chose to transition to the retail side of real estate financing in effort to work closer with families, veterans, and those who had previous financial hardships to achieve their goals of home ownership. As a homeowner and real estate investor, Shannon's personal experience in obtaining mortgage loans for her own purchases is extensive. She has bought and sold multiple properties and continues to invest in real estate throughout Los Angeles County. Shannon's specialization and breadth of experience in real estate purchase loans enables her to offer standard/conventional loans, government loans, hard money loans, and specialty/portfolio products.
