The Jobs Report Was a Mess—Mortgage Rates Loved It

Last week, we said all bets were off until we saw Friday’s jobs report—and that no other piece of economic data moves mortgage rates more reliably. This week proved why that warning is always worth repeating.

It’s not that the rest of the week was boring. In fact, the calendar from Monday through Thursday was packed with potentially interesting updates. Highlights included the Fed announcement on Wednesday, the latest inflation data on Thursday (via the PCE report), and a first look at Q2 GDP. But while those events offered a few moments of movement in the bond market, none of them caused much drama for mortgage rates.

That changed in a big way on Friday when the big jobs report (officially called “nonfarm payrolls”) came in much weaker than expected. The headline showed 73,000 new jobs versus a forecast of 110,000. That’s really only a moderate miss when it comes to this report and not enough in and of itself to put on the show we ended up seeing.

The real story was in the revisions. Payroll counts are always revised as more companies report to the Bureau of Labor Statistics (BLS). This happens for 2 months after the initial release. These 2 months of revisions were uncharacteristically big, accounting for a combined 253,000 reduction in the job count thus significantly downgrading the recent picture of the labor market.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30YR Fixed	7.27%	-0.02	0.00
15YR Fixed	6.92%	-0.03	0.00
30YR FHA	6.90%	-0.01	0.00

Difference Between the Two

Why does that matter for mortgage rates? Because a slower labor market leads to more bond buying, which in turn pushes rates lower. It also makes the Fed more likely to cut rates. Mortgage rates aren't tied to the Fed rate, but they do move lower in anticipation if a rate cut is widely expected. You could say that mortgage rates don't correlate well with the Fed Funds Rate itself, but very well with Fed Funds Rate expectations. And here's what those expectations did on Friday:

Mortgage rates followed suit with the average lender offering some of their best rates since early April. Some lenders even made mid-day improvements as markets continued to rally.

By the end of the day Friday, the average 30-year fixed rate had fallen by roughly an eighth of a percent, bringing us within striking distance of the lowest levels since October 2024.

Looking ahead, this jobs report puts much more weight on the next round of data. Inflation reports will be closely watched, but so will the next jobs report in early September—just two weeks before the next Fed meeting. Markets are now actively pricing in the possibility of a rate cut at that meeting. Whether or not it actually happens will depend entirely on how the incoming data stacks up.

For now, the takeaway is simple: this was a good week for mortgage rates, and it came thanks to a labor market report that strongly suggested things are cooling off. If that trend continues, rates could move lower still. If not, the recent improvement could be short-lived.

About Your Los Angeles Mortgage Broker

Shannon's expertise in residential mortgage lending spans more than 20 years. Beginning on the ground floor of the wholesale side of lending, Shannon subsequently succeeded as a loan officer, account manager, and account executive while working for one of the nation's largest mortgage lenders. In contrast to those who chose to leave the mortgage industry when the Los Angeles housing market began to spiral in 2008; Shannon's passion for helping others to become homeowners remained firmly intact. In fact the changes in the market and new lending laws made her want to help homebuyers to navigate the new rules of real estate lending more than ever. As such, she chose to transition to the retail side of real estate financing in effort to work closer with families, veterans, and those who had previous financial hardships to achieve their goals of home ownership. As a homeowner and real estate investor, Shannon's personal experience in obtaining mortgage loans for her own purchases is extensive. She has bought and sold multiple properties and continues to invest in real estate throughout Los Angeles County. Shannon's specialization and breadth of experience in real estate purchase loans enables her to offer standard/conventional loans, government loans, hard money loans, and specialty/portfolio products.
