## Big Improvements Don't Always Require Big News

We've had our fair share of big news events causing big reactions in markets over the past few months, but this week offered a welcome reminder that not every improvement in mortgage rates requires a dramatic headline. After moving back toward recent highs early in the week, rates recovered sharply on Wednesday and then managed to hold those gains through Friday, ending at the lowest levels since mid-May.

Some of the improvement was helped by lower oil prices and tame inflation data, but the biggest motivation came from quarter-end trading. Large institutional investors periodically adjust the balance between stocks and bonds in their portfolios. Because stocks have significantly outperformed bonds in recent months, many investors have been buying bonds to restore those targets. Higher demand for bonds translates into lower interest rates.

Unlike recent weeks, there wasn't a single dominant news story driving the market. Monday's weakness lacked a convincing explanation, Tuesday was one of the quietest trading days in months, and the strongest gains arrived Wednesday as quarter-end rebalancing demand became more apparent. Thursday was the only potential exception as bonds definitely seemed to benefit from an as-expected reading on a key inflation report, but most of the early improvement faded by the afternoon before giving way to an even more sideways day on Friday.

Sideways was good, in this case, as it meant the average top tier 30-year fixed mortgage rate spent both Thursday and Friday at its lowest level in more than a month. While that's certainly welcome news, it comes with a familiar caveat. There are a few more days left for quarter-end trading to potentially exaggerate market movement in either direction. Still, the bulk of that volatility has likely already been seen.

From there, investor attention quickly shifts back to economic data, which arrives in force next week. Due to the Independence Day holiday, the monthly jobs report will be released next Thursday instead of Friday. It is routinely the most important economic report of the month and has the potential to determine whether this week's improvement is extended or reversed.

## About Your Los Angeles Mortgage Broker

Shannon's expertise in residential mortgage lending spans more than 20 years. Beginning on the ground floor of the wholesale side of lending, Shannon subsequently succeeded as a loan officer, account manager, and account executive while working for one of the nation's largest mortgage lenders. In contrast to those who chose to leave the mortgage industry when the Los Angeles housing market began to spiral in 2008; Shannon's passion for helping others to become homeowners remained firmly intact. In fact the changes in the market and new lending laws made her want to help homebuyers to navigate the new rules of real estate lending more than ever. As such, she chose to transition to the retail side of real estate financing in effort to work closer with families, veterans, and those who had previous financial hardships to achieve their goals of home ownership. As a homeowner and real estate investor, Shannon's personal experience in obtaining mortgage loans for her own purchases is extensive. She has bought and sold multiple properties and continues to invest in real estate throughout Los Angeles County. Shannon's specialization and breadth of experience in real estate purchase loans enables her to offer standard/conventional loans, government loans, hard money loans, and specialty/portfolio products.
